

### **PS-4 Power Splitter with “Tie Downs” for 12-30 Volt Systems**

The QCAvionix PS-4, four-way Power Splitter is a rugged, reliable and safe way to deliver power to four devices in high vibration environments. The patent pending “Tie Downs” securely hold the power plugs into the sockets removing a major source

of failures when a power plug vibrates loose in your plane, boat or car. The PS-4 has a fused power plug and comes with three methods of installation: Double sided tape, Ears that accommodate self-tapping screws and Clips that can be slipped under an upholstery panel. The PS-4 has a red LED power indicator on the front panel and a 4-foot heavy-duty power cord.

#### **INSTALLATION**

The PS-4 is supplied with three mounting methods. The PS-4 kit has strong double-sided tape and a flat bottom that allows you to easily attach it to a flat smooth surface. The mounting ears on the bottom of the PS-4 slide out to accommodate self-tapping screws.

Finally, the spring mounting clips can be attached to the bottom of the PS-4. Remove the two recessed screws and replace them with the two long screws, provided, with one clip on each screw. It is recommended that the PS-4 be mounted with the sockets inclined towards the floor to prevent foreign objects from falling into an empty socket causing a short.

Mount the PS-4 in a convenient location inclined towards the floor

and plug it into your vehicle’s cigar/accessory jack. Plug in your devices and wrap the “Tie Downs” tightly around the ends of the plugs.

**SPECIFICATIONS:** Source: 12-30 Volts at up to 10 A, 4 standard cigar/accessory sockets, Fuse: Up to 10 Amps, **PS-4: \$29.95**
